## **MOXI with KERAFACTOR TREATMENT CONSENT FORM**

This form is designed to provide you with the information you need to make an informed decision about having a KeraFactorMD treatment procedure performed using the Moxi Laser to assist with delivery of the topically applied sterile KeraFactorMD solution through the epidermis to treat androgenic alopecia (AGA). The Moxi laser will cause mild damage to the scalp resulting in gentle wound healing response delivering some rejuvenating effects and improving the dermal environment potentially increasing the blood supply to the dermal papillae as a part of the wound healing mechanism, which should increase hair density and diameter.

If you have any questions or do not understand any part of this consent, please do not hesitate to ask us.

I hereby authorize Odinet Skin Care to perform the Moxi with KeraFactorMD treatment on me. I understand that the procedure is purely elective, and I have chosen to receive this treatment.

I understand the following:

This package priced at \$4000 includes one KeraFactorMD Combo Scalp and Hair System and 6 Moxi with KeraFactorMD Treatments only.

### Prior to Treatment:

- a. I should arrive with clean dry hair that is free from ALL hair care or styling products.
- b. I understand that dry shampoo and root color boost should be avoided the day of the treatment.
- c. I understand that I should avoid sun on my scalp for 1 week prior to treatment.
- d. I understand that I should avoid coloring my hair 48 hours prior to treatment.

### Nature of the Treatment and Procedure

The Moxi with KeraFactorMD treatment involves first, prepping the scalp, followed by several passes with the Moxi laser directly on the area to be treated, followed by the topical application of the KeraFactorMD serum. This treatment aims to revitalize and rejuvenate the scalp by increasing scalp circulation resulting in improved hair quality.

### Treatment Duration

The Moxi with KeraFactorMD treatment takes approximately 30 minutes. The treatment protocol requires six (6) treatments spaced four (4) weeks apart. For best results daily maintenance should be continued after treatment including a follow up assessment/evaluation.

### Post Treatment

For best results, patient should;

- 1.) Leave the KeraFactorMD solution from treatment in their hair until the following day, and then patient may wash their hair,
- 2.) Should wait 48 hours after the Moxi with KeraFactorMD treatment to color hair, and
- 3.) Use the KeraFactorMD Scalp Stimulating Solution, KeraFactorMD Shampoo & Conditioner, and other products as directed.

### Candidates for Treatment

I understand that there are no guarantees for success.

Ideal candidates are patients struggling with androgenetic alopecia (gradual hair loss over the crown, frontal recession, thinning of their part), and patients struggling with telogen effluvium (sudden hair loss 3-6 months after a stressor such as child birth, COVID, surgery, sudden weight loss, thyroid imbalance).

I understand that regrowth on completely bald areas with androgenetic alopecia may be limited due to follicle fibrosis.

I understand that this treatment will not combat hair loss due to autoimmune disease.

### Not Candidates for Treatment

If you would like to treat a bald spot that has been persistent for an extended period of time you are not a candidate for this treatment.

If you are experiencing alopecia areata, frontal fibrosing, Lichen Plano Pilaris, or scarring alopecia you are not a candidate.

**If you are allergic to Curcumin, you cannot receive any KeraFactorMD Treatments. Please inform your provider.**

If you have a severe salmon allergy, a patch test is recommended before undergoing a KeraFactorMD Treatment.

If you have been diagnosed with skin cancer of the scalp, or are suffering from an active scalp infection you should not use any KeraFactorMD products without your treating physician's approval.

If you have ever taken Accutane®, you should tell your provider. This drug can make it harder for your skin to heal after some treatments. This can happen even if you haven't taken the drug for a while.

### Side Effects of Treatment

You may experience slight discomfort during the treatment. You may also experience mild erythema lasting 1-2 hours after treatment. Some patients have reported experiencing a slight sunburn sensation for up to 48 hours after the treatment.

After the treatment some hairs in the telogen phase (resting phase) may shed due to the slight trauma from the laser. This does not occur regularly, but do not be alarmed if it occurs. Please notify your provider.

Consent to Photographs

I consent to photographs being taken to evaluate the effectiveness of the treatment.

Before and After Instructions

Instructions have been discussed with me. The procedure, potential benefits, and risks have been explained to my satisfaction, and I have had all of my questions answered. I freely consent to the proposed treatment.

Certification of Competency

I certify that I am a competent adult of at least 18 years of age.
